Education

Bachelor of Technology in Computer Science & Engineering

2023 – 2027

Bennett University, Greater Noida

CGPA: 8.8 / 10

Projects

Placeko – AI-Powered Interview & Job Intelligence Platform — *Python, FastAPI, LangGraph, React* **July 2025–Present**
[GitHub](#) — [Live](#)

- Architected an agentic AI platform using **LangGraph** to orchestrate resume analysis, role-specific interview generation, voice-based answer evaluation, and personalized interview feedback.
- Built a hybrid resume intelligence pipeline combining deterministic extraction with **LLM-based semantic extraction** and structured schema validation for reliable downstream AI workflows.
- Developed **Smart Job Intelligence** using embedding-based semantic retrieval, **384-dimensional Pinecone vectors**, and **CrossEncoder reranking** to identify and prioritize relevant opportunities based on candidate skills, resume context, and job requirements.
- Designed modular **FastAPI services** for resume processing, interview workflows, job intelligence, voice evaluation, and authentication, integrated with a React-based frontend.

TradeNova — ML-Powered Portfolio Risk Engine — *Python, LightGBM, Scikit-learn, React, Node.js* **2026 – Present**
[GitHub](#) — [Live](#)

- Built an end-to-end **ML risk analysis engine** using historical OHLCV market data, engineering return, momentum, volatility, drawdown, volume, and market-context features for stock-level risk analysis.
- Developed a **LightGBM-based risk prediction pipeline** incorporating GARCH(1,1) conditional-volatility forecasts alongside technical and market features.
- Evaluated the ML pipeline using time-based validation and out-of-time testing, comparing volatility classification/regression approaches and tracking **macro-F1, MAE, RMSE**, and correlation metrics
- Deployed the ML pipeline as an independent **FastAPI inference service**, integrating Python model inference with the Node.js trading backend and React frontend.

WanderNest — Full-Stack Rental Platform — *Node.js, Express.js, MongoDB, React* **Nov 2025 – Present**
[GitHub](#) — [Live](#)

- Developed and deployed an Airbnb-inspired rental platform supporting authentication, property listings, bookings, image uploads, and reviews.
- Implemented secure REST APIs using **JWT authentication, bcrypt password hashing, and role-based access control** for protected resources.
- Designed MongoDB data models and Mongoose queries for users, listings, bookings, and reviews with reliable backend integration.
- Integrated a responsive React frontend with REST APIs to deliver property search, booking, listing management, and review workflows.

Technical Skills

Programming: Python, C++, JavaScript, SQL

AI/ML: Machine Learning, NLP, LLMs, RAG, Embeddings, Scikit-learn, PyTorch

Backend: FastAPI, Node.js, Express.js, REST APIs, JWT Authentication

Databases: MongoDB, MySQL

Tools: Git, GitHub, Jupyter Notebook

Certifications & Achievements

- **Improving Deep Neural Networks – DeepLearning.AI (Coursera, 2025):** Hyperparameter tuning, regularization, optimization, and deep learning model improvement.
- **Algorithmic Toolbox – Coursera (2025):** Algorithm design, complexity analysis, greedy algorithms, divide-and-conquer, and dynamic programming.
- **Solved 450+ DSA Problems:** LeetCode & CodeChef; participated in 20+ competitive programming contests.
